Background to Survey

This survey was a repeat of the first national survey carried out by the Office of Population Censuses and Surveys in 1994.

Carried out by MORI, this work enables the changes that have occurred over the five year period since the 1994 survey to be measured and the implications for sport to be assessed

- The survey was carried out with a random sample of young people aged 6 to 16 years across England
- In total, 4730 young people were surveyed using self completion questionnaires
- Of those surveyed a total of 3319 participated representing a response rate of 72%
- The survey was carried out during the latter part of the summer term (for both the 1994 and 1999 survey) allowing for collection of information over the previous school year
- Young People were given a long list of 39 sport and exercise activities to select from and were allowed to select others not on the list

The questionnaire was designed to capture information about:

- sport participation levels both in and out of school lessons,
- membership of sports and other clubs where they do sport,
- involvement in competitions,
- enjoyment of sports,
- sporting role models,
- attitudes towards sport ,
- time spent on sport/leisure activities.

Sports participation was identified by the level of involvement in a sport or exercise activity at all in the previous year. Two measures were used:

- on less than 10 days
- 10 days or more (frequently)

This report presents participation rates on a 'frequent' (10 days or more) basis only (except extra curricular rating where participation is presented as 'at least once' in the past year)

TOP 10 SPORTS
YOUNG PEOPLE SURVEY RESULTS
IN SCHOOL LESSONS

Percentages of young people who participated on a frequent basis (10 or more times) in past year

Sport	Total (%) 1999
Athletics	35
Gym/Gymnastics/ Trampolining	33
Rounders	31
Swimming	30
Football	28
